**GitHub for this project:** <https://github.com/camknopp/NLP-Final-Project>

The only parts of the code in our .ipynb file that were not written by us are the Vocabulary class and the SkipgramDataset class, and the SkipgramDataset class code that we used has been modified by us to fit our needs. We took these two classes from hw3. Aside from that, all of the code in the .ipynb file is our own. We also did not create the scorer, as that was provided by the SemEval competition organizers.
